FFC (Fixed Flange) Standard Custom Form

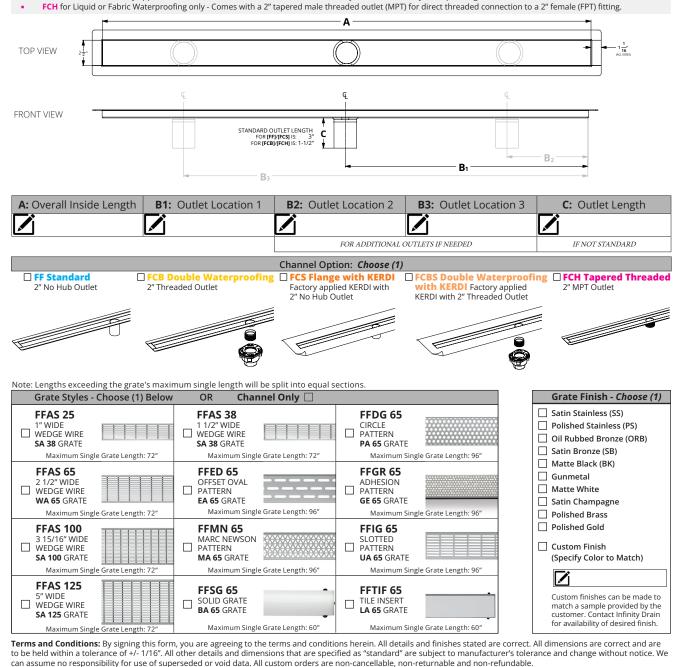

FF (Flanged) linear drains are designed for use with liquid applied (cold fluid applied) or fabric sheet membranes. The overall inside length of channel (A) is the finished length of the drain, with a 1-1/16" flange on all four sides to accept the waterproofing membrane. All outlet locations (B) are measured from the right inside channel edge. For this type of installation a mortar bed or equal is created up to and around the drain with the appropriate slope towards the drain. The waterproofing is applied over the mortar bed and the flange of the channel. Tile or stone is applied directly to the waterproofing for a low profile installation. The standard FC channel is provided with a 2" No-Hub Outlet.

Specialty channel options are available.

- FCB for Double Waterproofing Comes with a 2" threaded outlet for use with a clamping drain body and a traditional membrane as a primary waterproofing and has the standard 1-1/16" for a liquid/fabric secondary waterproofing.
- FCS for Schluter[®]-KERDI Waterproofing Comes with KERDI membrane factory applied to the channel for use with the Schluter[®]-KERDI system only. Uses a 2" No-Hub Outlet.
- FCBS for Double Waterproofing Comes with a 2" threaded outlet for use with a clamping drain body and a traditional membrane as a primary waterproofing with KERDI membrane factory applied to the channel for use with the Schluter[®]-KERDI system as secondary waterproofing.
