

FFC Sink Drain

[FF] linear drains are typically designed for use with liquid applied (cold fluid applied) or fabric sheet membranes. For a sink application the channel of the drain should be undermounted to the counter top or sink top using an epoxy, waterproof adhesive, or equal. The overall inside length of channel (**A**) is the finished length of the drain, with a 1-1/16" flange on all four sides to accept the waterproofing membrane. All outlet locations (**B**) are measured from the right inside channel edge. The angle of the flange under the basin of the sink (**D**) should be the same as the slope of the basin of the sink. These sink drains are provided with a finished edge that is flush with the height of the decorative grate. This height (**E**) is typically the same as the thickness of the sink top material. The outlet diameter (**F**) is available in various sizes and connection types.

Outlet connection types include:

- **No Hub** - Two pipes of the same outside diameter are abutted to each other and joined using a rubber coupling.
- **Slip Fit** - A male tail piece slips into another threaded pipe and is joined together with a slip nut and washer.

SECTION 1-1
